Naming Spokane's Streets Properly

Spokane Press, 1 December 1909

Progress is being made in the matter of getting some uniformity the system of street names prevailing in Spokane. A list of streets that have undergone a change in names by an order of the city council has been prepared by the water department and posted in that office. The list covers seven typewritten pages, and shows that some east and west streets, like Empire Avenue on the north side, had four different names in its progress across the city. The men who laid off the new additions years ago prided themselves on a distinctive set of street names, regardless of what names the adjoining additions carried. In one section the names of women—pretty, of course, were immortalized. In an adjoining district, which should bear the same names as the first one, the names of trees were used, because of the horticultural tendencies of the owner, no doubt. In another addition the owner was patriotic and named his streets after states or presidents, but the whole of these names have now been eliminated in favor of a little plain old Spokane.

In retaining street names, those best known and longer in use or that are representing a larger stretch of the street or an avenue were used. In this way the north and south streets of the north side can be found on the south side, and vice versa. Heretofore the names of many of the streets in one corner of the city were unknown in a parallel section on the other side of the town.

The next step that the council should take in this direction is to lace street names over the city, particularly in the outlying districts. This matter was brought up recently by Councilman Nelson and Ostrander of the Fifth Ward and referred to a committee, where it has since been sleeping.

The changed street names, without corner posts to guide one, makes things more complicated than before. The residents in the different localities cling to the old names, while the city guides and maps show the new names, hence here is a lot of confusion.

There are streets in the north end on which the names have been changed twice or three times in a year, and without the assistance of guide posts even the people living in the immediate vicinity do not now the official names. They will tell the inquirer that the street "used to be known as so-and-so, but I'll be blamed if I know what its right name is now."

A few days ago a man with a load of lumber carried it to Fifteeth Avenue in the Richland Park District, when the order was intended for Rich Avenue in Lidgerwood, which was formerly Fifteenth. The address was given the dealer as Fifteenth, and the teamster spent a whole day looking for a place to deposit his order.

A former street name stamped in the pavement on Wall Street in the Emerson/Garfield neighborhood.

As Paths Became Streets, a Young City Celebrated

Excerpts from his book "This Town of Ours... Spokane"
Jay J. Kalez, Spokane Daily Chronicle, 25 March 1969

Time was in this town of hours when the naming of a street or avenue called for celebration of some sort even a neighborhood hijinks.

Those were the days when the dirt roadways and packhorse trails of the Spokane Falls town site were just blossoming into Ave. status and cross streets were mere shortcut pathways stretching across vacant scab rock pasture lands.

Back in 1873 when James and Glover, "Father of Spokane" made his deal for the quarter section "squatters claim" of Messrs J.O. Downing and L.R. Scranton there were no streets or avenues platted in the original claim deed transfer papers. The 160 acres of Papa Glover's new holding were merely identified as land located approximately between the Spokane River on the north to beyond a territorial surveyed county section line roadway on the south that stretched easterly upriver to the Idaho-Washington territorial boundaries.

Sprague Was First

The "squatters claim" east and west boundary contain the stretch of land between what is now Monroe Street and Division Street. The bounding south roadway section line running east was later to become the townsite's first named avenue, Sprague Avenue. It was nearly a decade later, in 1880, that with the coming of the Northern Pacific Railroad to Spokane Falls, a platting and mapping of the original townsite became mandatory. By 1882, the dozen or so families that had formed the original Spokane Falls townsite had grown to nearly 1000 persons. A few years prior, the Northern Pacific Railroad, in surveying and acquiring its right of way across the Spokane Falls townsite, insisted that streets and avenues be positively platted and identified the reason behind this demand by the NP was later to be realized fully by then city officials.

Main Crossroad Set

Papa Glover had built his general merchandise store and stable corrals on the riverfront near where Coeur d'Alene Hotel now stands at Trent and Howard. As the community grew and a bridge was built across the river at that point the main crossroad of the community automatically located itself in Glover's front yard. During Spokane's 50-year silver jubilee celebration in the summer of 1932, Papa Glover was still alive and living in Spokane. In an interview with Spokane newspaper reporters, Papa Glover gave a vivid account of how he came to give most of the downtown streets and avenues the names they now carry.

Generals Honored

"My stable, corrals, and store we're located almost on the riverbank," Pop Glover told the reporters. "A wide dirt roadway ran south from the river to the newly surveyed section line running east to the Idaho-Washington territorial line upriver. On the townsite plat map, I named that section Sprague Avenue in honor of General J.W. Sprague, then General Superintendent of the Northern Pacific Railroad's western division. General Sprague was the individual we town officials dealt with mostly in planting the railroad's right of way across our townsite property.

"The wide road running North and South passing my store and stables I named Howard Street in honor of General O.O. Howard who had commanded the federal troops in this area during the Nez Perce 1877 uprise.

"Downriver a few 100 yards my partner and I, J.N. Matheny, operated a fair-sized sawmill. The access roadway leading south from the sawmill is named Mill Street. Another few 100 yards downriver was the roadway boundary of the 40 acres we had deeded to Frederick Post to entice him to move his grist mill from Rathdrum to a location on the Spokane River. I named that access road to the grist mill Post Street."

Front Was Easy

"My store entrance faced the river with a broad roadway fronting the buildings," Glover explained. "This approach to my business buildings I named Front Avenue because the roadway fronted the river. A roadway south of Front Street ran east and west to follow the river downstream into what is now Peaceful Valley. I expected this roadway to become the principal business street of the townsite and named it Main Avenue. I visioned the platted avenue further to the south, Riverside, as a fancy boulevard that would follow the high ground rim along the riverbank on west to the Hangman Creek gulch and then turn south to join the roadway leading into Spokane Falls' approach road from Lewiston and Colfax. This visioned boulevard until now had served us as our holiday horse racing course."

Division Was Logical

"When it came to naming and platting the north and south street crossing our quarter section town site," Glover went on, "I started with our eastern boundary and named that street Division because it divided our property from newly acquired N.P. right of way property. The next street to the west I named Browne in honor of J.J. Browne, a real estate man who had recently arrived in Spokane.

"Bernard was the name given to the short street that ran from the river to the N.P. right of way. Here the railroad planned to block off the street and build a switch yard site that would halt any through traffic.

"Beyond Bernard, to the west," Glover continued, "I decided to name the cross street in honor of the Territory of Washington and the next street west of that Stevens in honor of our territorial governor Isaac Stevens."

"The next three cross streets, Howard, Mill (now Wall), and Post being already entered on the townsite plat, I started with the names of past presidents, Lincoln, Monroe, Madison, Jefferson, Adams. Beyond Adams to the west where Browne's Addition was just being considered for annexation, I entered the names of trees found growing in the northwest area, Cedar, Walnut, Maple, Ash, Oak, Elm, Pine (now Cannon), Chestnut, Hemlock, Spruce, and Poplar."

"At the Y jog-swing of Riverside at Maple Street, down into the Hangman gulch approach, first swings to the south and replaces the old Riverside race course to Coeur d'Alene Street that rimmed the Hangman Creek gulch. This I called Coeur d'Alene Blvd."

Then Came Numbers

"For avenues on south of Sprague, I decided on numbers starting with 1st. The next avenue south between 1st and 2nd was the N.P. right of way. I called that Railroad Avenue. When the trackage angled southwest near Maple Street I named the extended Railroad Avenue Pacific Avenue. That completed the identity of the streets and avenues in our original town site plat," Glover concluded.

With the official platting and naming of Spokane's southside downtown streets and avenues, trouble soon began for the community's public officials. Spokane was growing by leaps and bounds in the late '80s. Within the next ten years, bridges were to span the Spokane River and a half dozen street crossings.

The north side river shore area was fast being populated. Also, a host of new additions were being added to the original townsite. Real estate business was booming and with each new addition petition for annexation into Spokane proper, new streets and avenues were platted, named, and mapped into existence. Each new addition petition for annexation presented a plat map showing proposed streets and avenues usually with street names already inserted.

Pioneer on Map

Meanwhile, the Northern Pacific railroad trackage had entered Spokane on the west climbing the grade from Cheney and Marshall up out of the Hangman Creek canyon and entering the Spokane townsite proper at about Cannon Street. Here A.M. Cannon, a town pioneer, had set up a new addition called Cannon Hill Addition.

The N.P. right of way ran eastward across Spokane in a straight line toward the Spokane River at its southward bend near the Olive Street bridge. Here, about where the old Schade Brewery now stands, the railroad built a roundhouse and a switch yard that blocked off all south-leading cross streets west of Division.

Officials Saw Isolation

The only reason the railroad did not block off Division Street and the four other streets between Division and Howard was that some of the city fathers suddenly realized that the N.P. right of way plan would physically almost isolate the entire area south of the N.P. trackage.

Union Park and Altamont Additions to the east were already well built up. A wooden trestle was built across the marshy gulch at Sprague, a few blocks east of Division, to accommodate the people living in the Union Park area. To block off Sprague at Division at the N.P. tracks would, in reality, have isolated all of that eastern area south of the river.

Compromise Set

As if this was not trouble enough, the railroad sought to close off every other street crossing of its tracks from Howard to Cannon Street. However, a compromise was finally worked out. Division and Browne remained open. Bernard stopped at the newly planned N.P. depot. Washington to Monroe remained open cross streets. However, from Monroe west every other street crossing was to be closed at the trackage.

The final compromise came when the railroad suddenly realized that to close off all the trackage street crossings it claimed would interfere with its switching facilities would defeat its own purpose of boosting Spokane's growth. It compromised by installing guard gates and guards at all cross streets between Division and Monroe. West of Monroe, Jefferson was closed off

at the N.P. tracks until past 1900. So, too, was Cedar and the streets west of Maple. With that rail crossing's controversy settled, the entire south side quickly became a well-populated residential district.

New additions being added, for the most part, kept the avenue number system for their avenue identification. West of Division they also kept the cross street named by Papa Glover in his original platting map.

There was a single deviation from the original plat map identification. Pine Street, with its rail trackage crossing finally opened to the new Cannon Hill Addition became Cannon Street. It now provided direct access to Cannon Hill Addition from Browne's Addition. Pine's name was then used to identify the first street east of Division.

Developers Took Over

with new additions springing up all over the southeast side such as Union Park and Altamont Additions, street and avenue naming was pretty much left to the additions' sponsors. The wooden trestle east of Division on Sprague was being replaced with an earthfill. However, the marsh at the fill site swallowed up more than 50,000 cubic yards of fill earth and still kept sinking.

Spokane pioneer's names were given recognition at a few streets in this area followed by Civil War generals. Most streets east of Division, however, got their names through the whim and fancy of the addition founders.

Throughout all the petitioning for annexations to Spokane proper, Division remained the east and west dividing line. Street house numbers ran from east to west of Division and from west to east of Division. Sprague Avenue was the north and south dividing line.

Names Retained

On the north side, across the Spokane River, city planners managed to retain the north-south cross streets names originally applied by Papa Glover on the south side. Here again, each Addition petition authored its own street naming program.

Bridge was the first avenue north of the Spokane River. It was followed by College Avenue which once provided access to Spokane College. Spokane's first higher learning school, founded in 1882, the college was abandoned in 1892 when the Great Northern acquired the college campus for its right of way into Spokane.

Then Girls and Boys

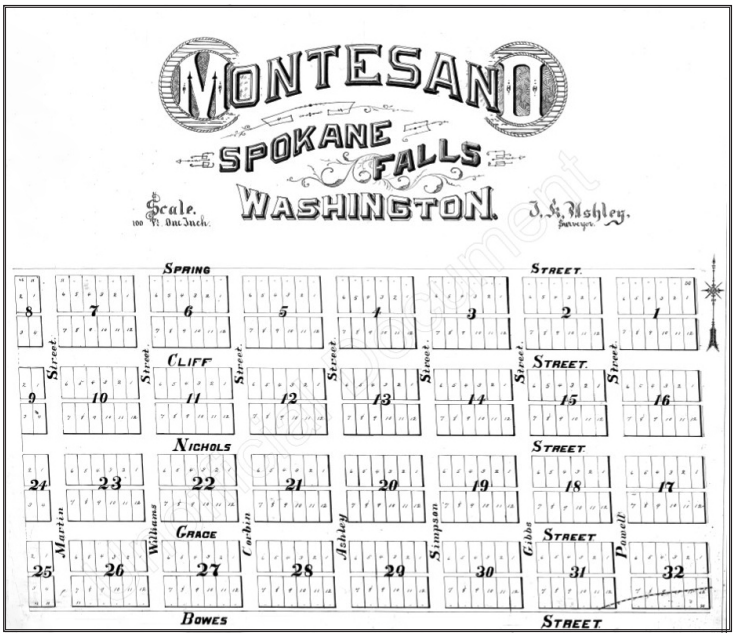
Further north, from Broadway to the city limits at Francis Avenue, addition sponsors for the most part carry the full street naming responsibility. In some Additions, girls' names were used and in others boys' names. Some street names chose characters of fiction, others chose authors. In the far northwest addition area, even the alphabet has been utilized. A to K Streets are in use with some of the alphabet still available. One northside addition combines "Circle", "Squares", "Park", "Boulevard", and "Drive". It may be a hodgepodge of names, circles, parks, and squares or drives, but the house numbers of homes still serve as a clue of course a street map usually helps.

Some Streets Roomy

Spokane's citizens, for the most part, have one thing for which they can thank the town's pioneer fathers. Spokane's original townsite planners set a precedent for the width of our city streets and avenues. It probably goes unnoticed to most folks but as compared with other western towns many of Spokane's streets are wide and roomy. They run fairly well to the compass readings, avenue east to west, streets north and south. The reason is simple. Back in the county's embryo days, the county exercised a 60-foot-wide public access roadway privilege along each county section line. Old Pop Glover utilized those same right-of-way dimensions when he laid out and platted most of Spokane's downtown streets and avenues. Spokane's past public officials may have placed the south approach to the Maple Street bridge on Walnut and its exit on ash but what's important about a street name? Nothing much except that it helps if the name is easy to spell.

Blue and white porcelain enamel street sign from around 1915.

Street Naming

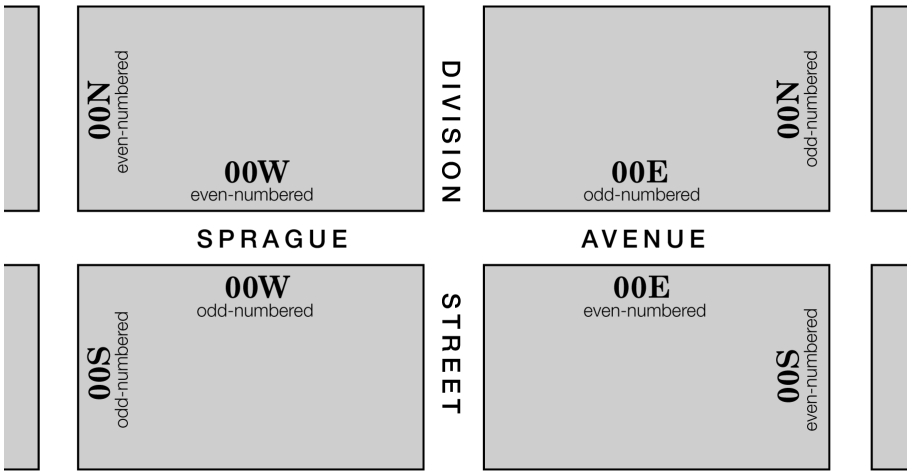


Montesano plat in the Audubon Park/Downriver neighborhood with its original individually named streets, platted in 1890.

Spokane grew steadily laying out a mosaic of plats and subdivisions in its early years. Hundreds of individually registered plats quickly made up the City of Spokane. Most of these individual plats contained their own set of streets with their own names, not aligned with or named the same as their neighboring plats. This caused a great deal of confusion as the name of one thoroughfare could change several times within a short distance. For example, Crestline Street, is made up of twelve different original street names from multiple plats. Another problem that presented itself was that many street names repeated within multiple plats, making locating some addresses quite challenging. There were eleven streets called "2nd Street" throughout the city at one time. Annexing the plats into the City of Spokane and creating uniform street names within those boundaries eliminated the confusion that plagued the fledgling city. The first major city-wide street renaming ordinance passed in 1891 and another in 1909. These established a guideline for new plats to follow in naming their streets to conform to the established street names.

Block Numbering

An ordinance passed by the city council on November 4, 1891, designated Sprague Avenue as the baseline for all streets running east and west. The Spokane River, was the previous baseline. Division Street became the baseline for all streets running north and south. The baselines previously used were Howard on the south side of the Spokane River and Monroe on the north side. The block numbers of all streets parallel to these baseline streets, begin at '00' at the intersection of those streets and increase from there in all four directions.



Baseline streets & block numbering, effective November 4, 1891.

In 1909, an ordinance was passed which determined that street addresses on north-south streets north of the river that used the prefix "0" would use "N" as a prefix (i.e. "0123 Howard" then became "N123 Howard"). The format has since changed so that addresses today read in the following order: "123 N. Howard".

About the Guide

The street name changes table (guide) was created by documenting the original street names collected from the original early plats. From there, the name history of the streets were traced referencing historic maps, city renaming ordinances, and newspaper archives (related articles and public notices). The block numbers associated with the streets they reference often appear to have no cohesive pattern to the blocks that were renamed and that is due to the fact that the plat boundaries did not align in a grid. The numbers shown represent the blocks where the street name changes occured. Blocks not on this list maintained their original names. Overlapping block numbers mean that two plats divided the same block. One street with two past street names renamed at the same time mean that the street was divided down the center between two plats. While intensive, diligent research was done in the difficult task of creating this table, it may contain errors. Highlighted street names indicate that a street has been renamed more than once and are are listed together, in order. Red arrow key:

» *= street was further renamed, look at next line for next name*
« *= street was previously renamed, look at previous line for previous name*
